User Menu:
Dropdown menu can have medium or semibold font, between gray and blue. Menu remains open until an option is clicked or clicked outside. Currently, only the Dashboard option will lead to another page.

Upper right part: Options with thin letters that change color when the cursor passes over them and change back after click. Color schemes: white, blue and gray. Upgrade button is highly visible: orange on a bordered button. User Menu activates when User Avatar is clicked.

The buttons "Network", "Complete Tasks", "Notifications", "Reports" don't a functionality yet. These can be disregarded for the moment.

NETWORK: When the user hovers over the graph it becomes dynamic, similar to a 3D experience. However, when the user wants to view a node in the network, the user needs to click on the node for detailed information. By clicking, for example, on the green Afro person, the other bubbles will be rearranged to center the clicked node in the middle of the graph.

WORD CLOUD: It also becomes dynamic (like a 3D graphic) when you hover over it. When the user selects a word, this one will stand out from the rest. When the user selects one of the themes/topics, e.g. positive, questionable, neutral, etc. only the words that belong to this cluster will be visible.

INTERACTIONS. When hovering the cursor over each line, and if it lands on a node, a bubble (or tiny text box) should display the value point. The timeframe of the information can be selected through the upper left button.

SENTIMENT ANALYSIS. The colors assigned for each sentiment is important. You can configure data used to create the graph with the upper left button. To access more information, click on the color bars. And to download a report, click on the box indicated for it. The data for this graph is not ready yet, but it will be delivered soon.
